Firm-Level Marketing Emphasis Data

If you use this dataset in your research, please cite the following:

Damavandi, Hoorsana, Mai, Feng, and Astvansh, Vivek (2025). A New Technique for Measuring a Firm's Marketing Emphasis. Marketing Letters.

Overview

This dataset provides firm-level scores for various marketing constructs, aggregated by company (GVKEY), year, and quarter. The scores are derived from textual analysis of corporate earnings call transcripts.

Coverage

337,599 firm-quarter observations from 11,296 U.S. public firms, 2003Q1 to 2025Q4 (Executive file; the Analyst file covers 254,338 firm-quarters over the same period).

Version History

- **v2 (August 2026).** Coverage extended from 2023Q1 to 2025Q4 using the identical published method. The 2023Q1 observations in v1 were incomplete due to the timing of the original transcript download and have been replaced with full-quarter coverage; all observations before 2023Q1 are unchanged from v1.
- **v1 (March 2024).** Original release accompanying the paper: 254,522 firm-quarter observations, 2003Q1 to 2023Q1.

Files

1. MarketingEmphasisScores_Executive.csv - Scores based on management presentations and Q&A responses (average of both)
2. MarketingEmphasisScores_Analyst.csv - Scores based only on analyst questions

Identifiers:

- GVKEY: Unique company identifier
- year: Calendar year
- quarter: Calendar quarter

Other Variables:

- document_length: Total number of words from the transcript segments used to calculate the scores for the given GVKEY, year, and quarter

Measured Constructs

1. **Marketing Orientation Measures** (8 dimensions): customer_orientation, competitor_orientation, interfunctional_coordination, longterm_focus, profit_focus, intelligence_generation, intelligence_dissemination, responsiveness (Deshpandé and Farley 1998; Kohli and Jaworski 1990; Narver and Slater 1990)
2. **Marketing Capabilities Measures** (8 dimensions): info_management, planning, implementation, pricing_capabilities, product_development, channel_management, communication, selling_capabilities (Day 1994; Vorhies and Morgan 2005)
3. **Marketing Excellence Dimensions** (3 dimensions): marketing_ecosystem, end_user, marketing_agility (Homburg, Theel, and Hohenberg 2020; Moorman and Day 2016)

Variable Types

Each file contains two types of variables for each marketing construct:

1. Raw scores: Original measures (e.g., customer_orientation, competitor_orientation)
2. ZCA-whitened scores: Transformed measures with zca_ prefix (e.g., zca_customer_orientation, zca_competitor_orientation)

The ZCA-whitened variables are orthogonal transformations that preserve semantic meaning while creating distinct measures that capture unique aspects of marketing emphasis (Kessy et al. 2016). The Marketing Orientation measures, Marketing Capabilities measures, and Additional Marketing Dimensions are each transformed as separate groups.
